

Machine Trust for MSPs & MSSPs

Know which machine is acting for which customer, under whose authority — with evidence the customer can independently re-check.

THE PROBLEM

Agents, MCP servers, APIs and automation can act across many customer tenants. MSPs need to answer which machine acted, for which customer, under whose authority, against which surface, with what current state and evidence.

THE ECZ-ID ANSWER

A cross-boundary identity, customer-authority, operator-delegation, current-state and evidence layer that complements RMM, PSA, IAM and security controls. Resolver supports independent re-check.

Start here

FREE MACHINE TRUST CHECK

17 browser-local questions. No signup. Findings and strengths, not a score. Actionable next steps and a locally generated findings brief.

£395 READINESS AUDIT

Paid upfront. Read-only, asynchronous and human reviewed. Fixed scope, written report, findings register and written follow-up Q&A.; Existing TrustOps rail; no new SKU.

Major Audit deliverables

- MSP/customer topology and actor/MCP/API surface inventory.
- Consequential action map: READ, WRITE and HIGH-IMPACT-ADMIN.
- Identity, customer-authority, evidence, revocation and freshness findings.
- Prioritised vendor-neutral recommendations plus an evidence appendix.
- Named human review, reusable findings register and written follow-up Q&A.;

MSP PARTNER ROUTE

Published qualification criteria, private activation and Partner of Record structure. No public recurring MSP prices, partnership claims, scarcity or certification.
